## **\*PROOF OF PARENTAGE SAMPLES**

Up to 6 months of age - cheek swabs will be accepted provided the swabs are taken by a vet Over 6 months old – only blood samples will be accepted, and must be taken by a vet. Confirmation of the dogs' microchip number must be provided by the vet for each sample taken.

---

**Note** – Proof of parentage samples (irrespective of age) taken before 1<sup>st</sup> March 2015 by cheek swab will be accepted provided we have confirmation that the swabs were taken by a vet.

## **LITTER SCREENING**

- Litter screening should be carried out between the age of 6-12 weeks and the puppies must be micro-chipped.
- The Puppy Registration folder should be taken to the examiner, the examiner should complete a Litter Screening Eye Examination Form, noting by each microchip number whether the puppy has passed or failed the test. The form should be forwarded to the ISDS Office along with the Puppy Registration folder.
- Any pups which fail the Litter Screen eye test will have their certificates marked “This dog/bitch is Affected with CEA , it may only be bred to a dog/bitch which has been DNA tested clear for CEA”
- Parents of pups which fail a litter screen must be DNA tested for CEA before any further breeding is allowed.
- The litter screen test (ophthalmic test) will count for future breeding rules.  
**Note:** Where pups are too old to be Litter Screened, both parents must be DNA tested for CEA before Registration. **Note:** Any dog/bitch which fails an ophthalmic test because of CPRA or PLL will be barred from breeding
